

iChums App (Phase-2) – Complete App Flow & Interaction Specification

This document is a **development-ready functional & UX reference** derived from the provided requirements, implemented features, and Phase-2 Figma design patterns. It is intended to be used by **engineering, QA, and product** teams as a single source of truth.

1. High-Level Overview

1.1 Purpose of the App

iChums is a **women's health & wellness tracking application** focused on:

- Menstrual cycle & fertility tracking
- Physical and mental wellness logging
- Health analytics & insights
- Privacy-first personal health journaling

The app enables users to **log daily health signals, visualize patterns,** and **gain awareness** of their cycle and wellbeing.

1.2 Target Users

- Women tracking menstrual cycles
 - Users monitoring mood, symptoms, sleep, water, and activity
 - Privacy-conscious users requiring app-level security (PIN)
 - Both **casual trackers** and **data-driven users**
-

2. Screen Hierarchy & Navigation Flow

2.1 Primary Navigation Structure

Bottom Tab Navigation (Primary)

1. Home
2. Calender/Logs
3. Analytics
4. Community (if enabled)
5. Self Care (Articles for reading)

Secondary Navigation Types

- Stack navigation (push / pop)
- Modal popups (Log Mood, Symptoms, Activity, etc.)
- Calendar overlays
- Bottom sheets (selection lists)

Back navigation:

- Android: system back
 - iOS: header back arrow
-

2.2 Screen Hierarchy

A. App Entry

- Splash Screen
 - Authentication Check
 - Logged-in → Home
 - Logged-out → Login / Onboarding
 - Continue As Guest
 - Continue with Google
-

B. Authentication & Onboarding

- Welcome Screen
- Login / Signup
- OTP Verification
- Cycle Setup (first-time only)
- Last period date
- Cycle length
- Period length

Exit: Redirects to **Home**

C. Home Screen

Sections:

1. Cycle Summary Card
2. My Space (Quick Log Area)
3. Short insights / reminders (if enabled)
4. Community/Social Buzz
5. Daily Reads

Navigation:

- Tap Cycle Summary → Cycle Analytics
 - Tap My Space item → Respective Log Popup
 - Arrow on My Space → Select Item Screen
 - Community Popular Posts/Social Buzz Posts
-

D. My Space – Select Item Screen

- Fixed items: Water, Sleep (non-removable)
- Optional items: Mood, Symptoms, Diary, Activity, Discharge, etc.
- Heart icon indicates selection state
- Max 2 optional items selectable

Exit:

- Back → Home (instant update)
-

E. Log Popups (Modal)

Calendar View Of Periods

Common structure across:

- Log Mood
- Symptoms
- Physical Activity
- Vaginal Discharge
- Water
- Sleep
- Diary

Elements:

- Header + subtext
 - Date selector (calendar)
 - Options / inputs
 - Save / Cancel
-

F. Analytics

Analytics Tabs:

- Cycle Analytics

- Symptoms Analytics
- Mood Analytics
- All cards Analytics

Common components:

- Calendar (monthly / weekly)
 - Summary breakdown
 - Trend charts
 - Editable day view
-

G. Cycle Analytics Screen

Sections:

1. Cycle Summary Card
 2. Irregular Cycle Alert
 3. Cycle Trend Chart
 4. Cycle History Table (Overall / 3M / 6M)
-

H. Settings

Sections:

- Profile
 - Notifications
 - Access Code (PIN)
 - App preferences
 - Legal (Privacy, Terms)
-

3. Detailed User Journeys

3.1 First-Time User Journey

1. Install app
2. Launch → Onboarding
3. Login / Signup or Continue as Guest
4. OTP verification
5. Onboarding Flow
6. Cycle setup
7. Redirect to Home

Exit points:

- Cancel signup
 - App close
-

3.2 Daily Logging Flow

1. Open Home
2. Tap My Space item (e.g., Mood)
3. Select date (default today)
4. Choose option(s)
5. Save
6. Data reflected instantly

Conditional paths:

- Past date → Prefilled data
 - Cancel → No save
-

3.3 Analytics Review Flow

1. Open Analytics tab
 2. Select module (Symptoms / Cycle)
 3. Browse calendar
 4. View summary
 5. Tap date → Edit logs
-

3.4 Secure Access Flow

Enable PIN:

1. Settings → Access Code
2. Toggle ON
3. Create PIN
4. Confirm PIN

Unlock:

1. App launch
2. Enter PIN
3. Correct → Access granted

Failure:

- Incorrect PIN → Error state
-

4. Component & Interaction Breakdown

4.1 Buttons

- Primary: Save, Continue
- Secondary: Cancel

States:

- Default
 - Disabled (validation failure)
 - Loading
-

4.2 Inputs

- Numeric keypad (PIN)
- Text inputs (Diary, Add Symptom)
- Calendar selector

States:

- Focused
 - Error
 - Disabled
-

4.3 Toggles & Selectors

- Secure Access toggle
 - Heart selection
 - Multi-select chips
-

4.4 Micro-Interactions

- Selection highlight
 - Chart animation
 - Error shake (PIN)
 - Smooth modal transitions
-

5. Data Requirements & Dependencies

5.1 User Data

- Profile info
 - Cycle configuration
 - Logs (date-based)
-

5.2 Logging Data Model (Simplified)

- Date
 - Category
 - Selected values
 - Notes (optional)
-

5.3 Analytics Dependencies

- Aggregation by date
 - Monthly summaries
 - Trend calculations
-

5.4 Backend Assumptions

- Auth token-based APIs
 - Secure local storage
 - Offline cache with sync
-

6. Design Anomalies & Open Questions

6.1 Potential Gaps

- Accessibility states not explicit
 - Error copy consistency
 - Empty analytics state definitions
-

6.2 Suggestions

- Add tooltips for analytics
- Add confirmation toast on save
- Add retry UI for network failures
- Add accessibility labels

7. Usage of This Document

This document can be used for:

- Feature development
- QA test case creation
- Regression planning
- Product reviews
- New team onboarding
